

Making **mobility** **easier together.**

Automatically opening and closing garage doors:
with Becker.

BECKER
Together it's easier.

Safe and easy access

Automation of garage doors with roller door control unit Beck-O-Tronic

It is often the small things that make life easier. For instance, arriving home and driving safely into your garage without having to get out of your car. Simply open your garage door at the push of a button from inside your car; especially when it is raining or dark outside. The Centronic radio transmitter ensures your door control unit is compatible with your other radio controlled systems, e.g. your roller shutter or awnings, and offers even more comfort. Keep everything under control.

With Becker.

Your authorized dealer:

Safe and secure

If you arrive home in the dark, Becker drives and controls provide added safety and security: Open the garage door, turn the light on, close the door once you are safely inside the garage – everything can be controlled fully automatically without the annoyance of having to leave your car.

Convenient whatever the weather

Even in heavy rain, snow or storms: You always arrive home safe and sound with Becker. Just open your garage door at the push of a button and leave the bad weather outside.

Complete flexibility

Both hands full and unable to operate the transmitter to open and close the door? In this case, it is extremely convenient that someone inside the house can, e.g., use a second transmitter to carry out this task for you. Prepared for every situation: with Becker.
