

## Lean back easier together

Open and close roller shutter and  
sun protection applications via radio controls:  
**with Becker.**

**BECKER**  
Together it's easier.

# Flexibly in motion

## Radio control of roller shutters and sun protection

Get your roller shutter and sun protection moving without having to move yourself: with just a touch of a button on your hand-held transmitter, which does everything for you via radio. Or if you prefer to not have to lift a finger you can leave all the work to the smart CentralControl system. This allows you, for example, to schedule times at which shutters and suns protection are automatically raised or lowered. With the CentronicPlus radio, you receive additional feedback as to whether the command has worked.

**Intelligent drives** with integrated radio receiver for roller shutters and sun protection

- Various models available with Centronic or CentronicPlus radio receiver
- Sensitive obstacle detection or blockage detection help protect your installations
- Application-specific special functions, such as freeze protection for roller shutters or fabric tensioning for awnings
- Special highlight of CentronicPlus: Fully precise approach and feedback possible via a gateway

**CentralControl CC41**  
Smart roller shutter and sun protection control

- Control of Centronic, CentronicPlus and B-Tronic radio-controlled products
- Configuration via free Becker CentralControl app
- Operation via smartphone or tablet
- Local data storage, access on the go optional

**TimeControl TC511**  
1-channel wall transmitter with integrated timer

- Compatible with the Centronic radio
- Weekly, block and daily switching program
- Astronomical function for morning and evening saves readjusting the switching times
- Light sensor SC43 can be connected

**EasyControl**  
EC541 PLUS, EC548 PLUS or EC5416 PLUS

- Available as 1, 8 or 16-channel hand-held transmitter
- Compatible with CentronicPlus radio
- Multicolour display (10-segment) for simple status feedback, setting and start-up
- Two freely selectable intermediate positions per drive - retrieved by pressing the button twice

**VarioControl and LightControl**  
External radio receiver

- For retrofitting wired roller shutter and sun protection drives and lighting systems to the CentronicPlus radio system
- Different operating modes allow the integration of various trades
- Integration into the CentralControl system for smart control of your home

**MemoControl MC411-III**  
1-channel wall transmitter with memory function

- Compatible with the Centronic radio
- Can be integrated into switching ranges from many manufacturers with the 55 x 55 mm central board dimensions
- Easy programming of two switching times (daily repetition)

Your specialist dealer:

### Intelligent technology

Drives with integrated radio receiver offer the highest level of convenience. With the CentronicPlus radio system, you also receive feedback as to whether the command has been executed correctly. The right control units offer additional features that make life even easier.

### Save energy

In summer, roller shutters provide reliable protection from the sun, preventing rooms from heating up uncontrollably. It also protects furniture and floors. In winter, when you close your roller shutters at dusk, you can reduce heating costs by up to 15 %.

### Smart living, even on the go

Small signal, great effect: With Becker's radio solutions, you have roller shutters and sun protection always under control. The CentralControl system enables operation via smartphone or tablet - even while on the go via the free Becker CentralControl app.
