Together it's easier.

It's nice to be considered!

Automate roller shutters with BECKER

Life's full of surprises. You just can't have your eyes everywhere. You won't have to. Thanks to the obstacle detection integrated in your roller shutter drives, you can relax and devote yourself to more important tasks.

It reacts on contact with an obstacle and causes the roller shutter to stop. Whether flower box or tricycle - everything is safe, completely without your intervention. The matching control system additionally increases the comfort: Opening and closing happens fully automatically and around the clock.

Roller shutter drive with electronic limit switching

- Sensitive obstacle detection to save the roller shutter when encountering an obstacle
- Anti-freeze mechanism at the top and below
- Burglar resistance when using anti-lifting devices
- Drives can be connected parallel without additional control

- Preprogrammed and individually programmable switching times
- Light sensor LS26 can be connected

MemoControl MC42
Memory button

- Intelligent pushbutton with latching action
- Easy programming of the switching times
- Slide switch for easy changing between manual and automatic mode

Sensitive obstacle detection

If your roller shutter encounters an obstacle, the drive stops. Safety for you and the roller shutter are the main focus here. The intelligent drives from Becker help you to feel safe.

Comfort on the minute

When the sun rises or sets: The astro function opens and closes your roller shutters on time - 365 days a year. Late risers can also program their own „sunrise“ with the control unit.

Better safe than sorry

With roller shutters you can reliably protect your home and yourself from too much light and from burglars. A good feeling that you can always rely on with Becker controls, even when you are on the move.
