# THE QUIET PROFESSIONAL -
## WITH AND WITHOUT RADIO TECHNOLOGY

The EVO drive generation **from Becker.**

EVOLUTION

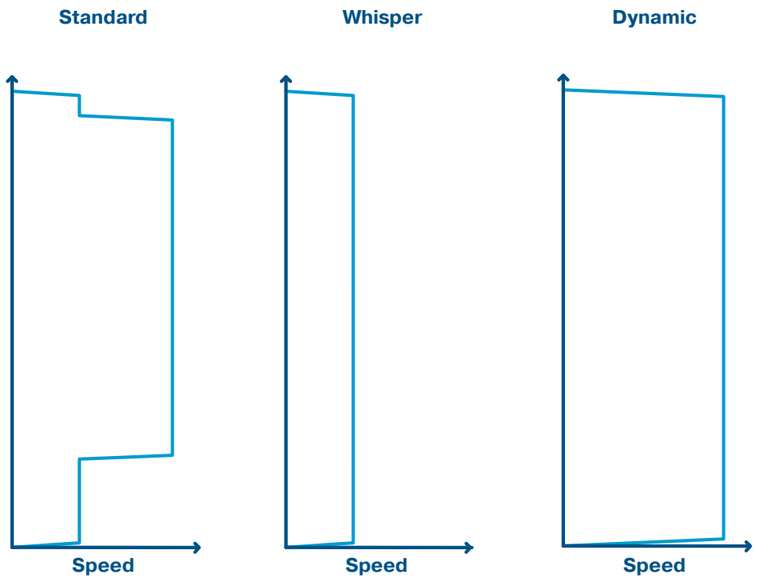
BECKER
for you. forever.

# SIMPLY QUIET
# AS A MOUSE

Discover the future of comfort with the EVO drive series from Becker. This drive series has been specially developed to offer you exceptionally quiet operation so you can enjoy the peace and quiet of your home. With the customisable drive modes - standard, whisper and dynamic - you can adjust the operation of your drives exactly to your needs.

The EVO drive series is available with integrated CentronicPlus radio technology and as a wired version. The radio version also gives you the option of seamlessly integrating your drives into the CentralControl system from Becker. You can even use it to control the drives when you are out and about, giving you maximum convenience and control. Thanks to the user-friendly ‘Becker Tool’ app, customising the driving profiles is child‘s play. This app enables even greater flexibility by allowing you to make your settings conveniently and intuitively. At the same time, it can also be used to make all the settings for the CentronicPlus radio system.

Download the new Becker tool directly and benefit from many advantages when setting up the EVO PLUS drive series and your CentronicPlus world!



**Driving mode ‘Standard’**
In this driving mode, the drive starts slowly and then gets faster and faster until it reaches its maximum speed. It then reduces the speed and reaches its end point.

**Driving mode ‘Whisper’**
The drive moves constantly and slowly until it reaches its end point. This makes the drive even smoother and is therefore suitable as a setting for the children‘s room, for example.

**Driving mode ‘Dynamic’**
With more revolutions per minute, the drive increases in speed with this travel profile. The roller shutter is raised quickly until the end point is reached.

## The highlights of the EVO drive type

- Evolution technology enables the selection of different driving modes: Standard, dynamic, whisper mode
- Particularly quiet-running and system-friendly motor technology
- Fly screen protection function: Detects open insect screen door and prevents damage to the system
- Top freeze protection: The drive stops shortly before reaching the upper stop end position, this position is cyclically monitored and corrected
- Sensitive obstacle detection in DOWN direction for optimum protection of the application and the obstacle
- Integrated Bluetooth interface enables configuration via smartphone app
- **Additional highlight EVO CentronicPlus drive type:**
  Wireless software update possible
