

# BECKER

for you. forever.

Our emblem is a symbolic representation of Becker: it evokes a fingerprint – unique and deeply rooted in our company's history. At the same time, it symbolizes the wide range of our applications – from roller shutters and sun protection to smart solutions. The opening shapes represent movement, while the waveforms stand for wireless control. At the center lies the globe – a sign of our commitment to sustainable, future-oriented technologies.

An insight into the world of Becker-Antriebe is provided by shareholder and Managing Director Maik Wiegelmann.

Maik Wiegelmann  
Managing Partner

## A FEW WORDS IN ADVANCE

Dear Readers,

Becker stands for progress, quality, and reliability – and for the vision of making our customers' lives simpler, more comfortable, and safer. As a medium-sized company with strong team spirit and many years of experience, we develop innovative drive and control solutions that prove their worth in everyday life – today, tomorrow, and in the future.

Whether in private homes or complex large-scale projects – our products "Made in Germany" ensure smooth operation, maximum comfort, and dependable safety. You are always at the heart of our efforts. Together with strong partners from the skilled trades, we guarantee professional advice and expert installation – for a genuine boost in quality of life.

For you. forever. Three words, one promise: We want you to relax, knowing you can always rely on Becker. Every member of our team contributes with passion to fulfilling this promise every single day.

Get to know us and discover what lies behind the Becker brand – and let's shape the future together.

Warm regards,  
Yours sincerely,

Maik Wiegelmann

Innovation born of tradition

# INSIGHTS

When our company founders Emil and Adolf Becker opened the doors to their workshop in Sinn in May 1921, their motivation was to offer solutions that make life easier. This idea has remained with us to this day.

The roots of our company go back to a small mechanical workshop, where Emil Becker, working on his own, laid the foundation for what would become our brand today. At the very location where our administrative headquarters now stands, he began with great dedication and skilled craftsmanship. It soon became clear that further development would not be possible without mechanical production. However, the financial means for the necessary investments were lacking. At this crucial point, Emil Becker received strong support from his brother Adolf, an independent master electrician. He joined the company as an equal partner – a perfect complement that made their shared success possible.

In the early days, the focus was on manufacturing gears. Just a few years later, up until the outbreak of the Second World War, Becker had earned an excellent reputation as a respected gear-cutting company. After the war, the company resumed operations, initially offering gear-cutting as contract manufacturing. However, with the economic upswing of Germany's post-war "Wirtschaftswunder," a pivotal decision was made: Becker began developing and producing a modern steering gear for the popular three-wheeled trucks manufactured by the Hamburg-based company Tempo. The patented steering gear proved to be a great success and was produced in large quantities and exported worldwide until the late 1960s. Becker quality "Made in Germany" began to conquer international markets.

1965 marked an important turning point in our history: with the development and production of gate drives and corresponding control units for industrial applications, Becker entered a new business field. This move proved to be a valuable foundation when, in 1971, the product portfolio was expanded to include electric drives for roller shutters and sun protection systems. The development of electrical and electronic control units represented another significant milestone – paving the way for future innovations.

Since 2013, Becker has been breaking new ground with the introduction of its own home control unit, CentralControl. This system allows roller shutters, sun protection, electrical devices, and lighting to be controlled centrally – even remotely. Our continuous development in the field of smart home technology demonstrates that we are well equipped for the future and are actively helping to shape technological progress.

Despite all our successes and international orientation, Becker has remained a family-owned company. Today, Hans-Joachim Wiegemann, the grandson of Emil Becker, and his three sons are actively involved in the company's management as shareholders. Since 2023, Maik Wiegemann has been leading the company as Managing Director, supported by Carsten Schwarz, who joined in 2024 as Commercial Director.

Becker has grown into an internationally sought-after provider. Several hundred thousand drives for roller shutters, sun protection systems, and other applications leave our plant in Sinn each year, along with our international subsidiaries. Companies from around the world turn to us for advice on technical challenges and place their trust in our innovative strength and the quality of our products.

Our focus is on smart solutions for home automation that combine comfort, security, and energy efficiency. It is the added value created by our team that strengthens our customers' trust. One example is our bidirectional radio system CentronicPlus, which has been continuously developed since 2018 and is setting new standards in the industry.

Since 2024, Becker has carried a new company logo and the claim for you. forever. Three words, one promise: for our customers, for our partners, for a sustainable future. Our redesigned circular emblem symbolizes the diversity of our work – from movable roller shutters and sun protection solutions to innovative radio technology and sustainable concepts for our planet. Our history is shaped by courage, innovative strength, and a clear forward-looking vision. With these values, we will continue to set new standards in the future and develop smart solutions that make our customers' lives simpler and more comfortable.

As part of this development, Becker established subsidiaries in:

**Maastricht (since 1992)** – serving the markets in the Netherlands, Belgium, and Luxembourg

**Paris (since 1995)** – serving the French market

**Madrid (since 1999)** – serving the Spanish market

**Prague (since 2001)** – serving the markets in the Czech Republic and the Balkan countries

**Izmir (since 2011)** – serving the markets in Turkey, the Middle East, and several former CIS countries

A production facility has been located in **Slovakia** since 1994.

In addition, Becker collaborates with partners in most European countries and overseas who strengthen our brand locally.

We create products designed to last a lifetime – and provide top-level advice and support.

So that our customers can benefit from the advantages of automated applications in the long term.

# A GOOD FEELING

How Becker inspires your customers.

When purchasing a high-quality product, we all choose the provider we've heard the best things about.

We trust them almost unconsciously. And that is precisely the decisive success factor behind the Becker brand.

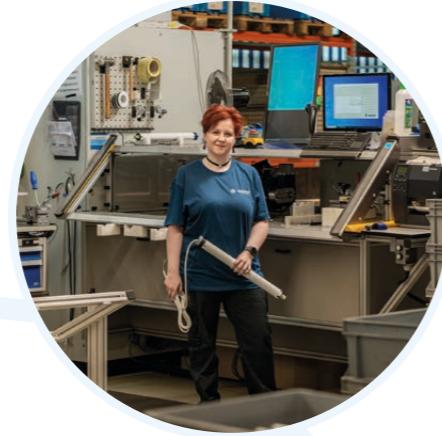

Becker stands for far more than just drives. Our customers want to automate their applications – roller shutters, awnings, venetian blinds, ZIP screens, and much more. But in truth, what they're really looking for is something else entirely: they want to live and work without worry. They want to focus on what truly matters, without having to think about technology and functionality. That's exactly what we make possible.

Our products are made to last a lifetime – reliable, durable, and of the highest "Made in Germany" quality. But we don't just deliver top-class drives and control systems – we also provide expert advice and top-level support. Because our goal is to ensure that our customers benefit from the advantages of automated applications in the long term.

Why Becker? Because we offer more than just technology. We offer peace of mind. The confidence of having the right product in place and the right partner by your side. We make sure everything runs smoothly – not just today and tomorrow, but well into the future.

For you. forever. is our promise. We stand for sustainable solutions that enable our customers to live worry-free while also contributing to the preservation of our planet. Because true innovation means not only improving today's technology, but shaping a future that endures.

### CREATED TO LAST

Drives and controls made to last a lifetime: durable, future-oriented, and therefore sustainable – thanks to unbeatable “Made in Germany” quality.

Immerse yourself in the world of Becker-Antriebe and gain fascinating insights into the production and creation of our high-quality tubular drives. Experience precision, innovation, and passion – the values that define us.

### QUALITY THAT CONVINCES

Why quality makes all the difference at Becker.

At Becker, quality means more than just durable products. We create sustainable solutions designed to last a lifetime – “Made in Germany” and manufactured with the highest precision.

You can rely on Becker to be the right partner by your side for the long term. 100% quality and dependable delivery are a matter of course for us.

Quality is a continuous process for us – one that we constantly develop and improve. We are committed to achieving excellence across all relevant dimensions of quality – whether in the durability, reliability, and simplicity of our products, the sustainability of our company, or the customer experience, with optimized ordering processes, top-tier consulting, and hands-on training.

For us, quality means not only perfection in the here and now, but also responsibility for the future. Our sustainable solutions actively contribute to protecting our planet – because true quality is always designed with the long term in mind.

**QUALITY**  
made in Germany

# SUSTAINABILITY THAT ENDURES.

Sustainability starts with longevity – and that is exactly what our products are designed for. At Becker, we focus on quality that proves itself over many years. Our drives, control systems, and solutions are engineered to require minimal maintenance and to operate reliably for decades. This means: less replacement, lower resource consumption, and therefore truly sustainable use.

Another sign of our commitment to sustainability is our solar-powered products. They enable efficient and resource-friendly control – independent of the power grid. In this way, we contribute not only to the energy transition, but also to the protection of our planet.

Our vision is to develop forward-looking solutions that combine durability with innovation. Long-lasting, reliable, and sustainable – for a world that remains worth living in tomorrow.

A sustainable home saves energy and enhances comfort. With intelligent control solutions, energy consumption can be reduced by up to 15% – automatically. Roller shutters and sun protection systems respond independently to changes in the weather: keeping heat out in summer and warmth in during winter. All without any effort from the user, yet with noticeable benefits for both energy costs and the environment. This way, you enjoy maximum living comfort while actively contributing to sustainability.

## SUSTAINABLE

by  BECKER

### Our Measures

- Certified energy management system DIN EN ISO 50001
- Solar power from photovoltaic systems
- Promotion of e-mobility
- Use of sustainable paper for our printed materials
- Support for sustainable reforestation

Since as early as 2006, the company has been operating in accordance with the requirements of **DIN EN ISO 50001** – an internationally recognized standard for a certified energy management system. This system enables Becker to systematically record, analyze, and continuously optimize energy use. The goal is to sustainably reduce energy consumption, conserve resources, and continuously improve energy efficiency.

In addition, Becker practices environmentally conscious actions in its day-to-day operations. The shipping hall and the Becker Academy building have been equipped with **photovoltaic systems** to harness clean solar energy. This not only reduces CO<sub>2</sub> emissions, but also lowers energy costs and increases independence from external power sources.

Another key focus is the **promotion of electromobility**. The vehicle fleet is being gradually electrified – for years now, priority has been given to acquiring plug-in hybrid vehicles (PHEVs) and battery electric vehicles (BEVs). The necessary charging infrastructure has been generously scaled, is powered by green electricity, and is available free of charge not only to employees, but also to customers and suppliers.

In addition, Becker consistently uses **100% recycled paper** for all printed materials and supports projects such as sustainable **reforestation** to actively contribute to environmental and climate protection.

# SUCCESS: FAMILY-OWNED BUSINESS

Yesterday, today, and in the future.

Becker is and will remain an independent family-owned business. Despite all our successes and international focus, we have always preserved our family roots. Today, Hans-Joachim Wiegelmann, the grandson of our company founder Emil Becker, and his three sons are deeply involved in the management of the company.

Since 2023, Maik Wiegelmann has been leading the company as Managing Director. In 2024, Carsten Schwarz joined the executive team as Commercial Director. Together

with his brothers Andersen and Julian, Maik Wiegelmann shares responsibility for the future of the company as a shareholder. Hans-Joachim Wiegelmann also remains a key figure in the company as a shareholder and owner.

"We are proud that Becker remains a family-owned company. Our values, entrepreneurial spirit, and long-term perspective will continue to be the foundation of our success in the future." – Maik Wiegelmann

QUALITY  
made in Germany

DEEPLY  
ROOTED

Becker is a European company with strong roots in Germany. Active around the world, yet firmly anchored to our founding location in Sinn, Hesse, we combine tradition with innovation and stand for quality "Made in Germany."

With more than 350 employees worldwide – around 240 of them in Germany – we are committed to reliable, forward-looking solutions. Our success is reflected in the numbers: an annual turnover of 62 million euros and a production capacity of 750,000 tubular drives per year speak for themselves.

Thanks to our subsidiaries in the Benelux countries, France, Spain, the Czech Republic, Turkey, and Slovakia, as well as strong cooperation partners in Asia, Australia, Europe, the Middle East, and Africa, we are exceptionally well connected on an international level. Despite our global presence, our foundation remains clear: quality, reliability, and innovation – from Germany to the world.

Headquarters of Becker-Antriebe

# PRODUCTS THAT THINK WITH YOU

### Your benefits at a glance

- Reliable "Made in Germany" quality
- Easy and time-saving installation
- Fast and intuitive programming
- Smart home-compatible systems
- Noise-optimized and maintenance-free drives
- Radio solutions with high stability
- Wide product range for numerous installation scenarios
- Accessories and extensions from a single source
- High compatibility within the Becker system
- Long-term spare parts availability

### FIT FOR SMART HOME

Not everyone wants to install a smart home system right away when renovating or building a new home. If your customer decides against a smart home solution today – for whatever reason – we still recommend laying the groundwork for the future when installing a new roller shutter or sun protection drive. Make your customers' homes future-ready and give their children or potential buyers of the property the option to easily retrofit a smart home hub at a later stage.

# SPECIAL REQUIREMENTS

The Becker modular system for customized solutions.

A pool that can be safely covered at the push of a button. A sturdy aircraft boarding step that instills confidence in travelers from the moment they board. Or a fire protection curtain in a shopping mall that deploys reliably within seconds in an emergency. Such special requirements call for equally special solutions – and that's exactly where Becker Extended Applications comes in. With our flexible modular drive system, we offer customized solutions for applications where standard series drives are not enough.

Our proven technology enables designers and developers to integrate powerful, tested, and reliable drives into demanding projects. This paves the way for intelligent systems that deliver greater comfort, efficiency, and safety.

### EXTENDED applications

For projects of any size

# RELIABLE TECHNOLOGY

Our products are used in a wide variety of projects – from smart single-family homes to complex commercial properties. Whether it's private dream homes, modern office buildings, hotels, or unique places like a chocolate museum – wherever reliable drive and control technology is needed, customers trust Becker solutions. Be inspired by our reference projects and discover just how versatile intelligent building automation can be.

## Athletics Hall of VfB Stuttgart

In the athletics hall of VfB Stuttgart, a custom sun protection system ensures optimal training conditions. Seventeen seamless ZIP screens, each 6.30 meters high, shade the glass façades while still allowing an unobstructed view to the outside. The vertical awnings are operated via wired drives integrated into the hall's KNX system, enabling flexible adjustments to weather conditions and user needs. This guarantees a glare-free and comfortable indoor climate for the professionals all year round.

## Multi-Family Residence on Lake Constance

In the center of Friedrichshafen, a residential building with 11 apartments was constructed, blending harmoniously into the historic surroundings with its traditional mansard hip roof. Aluminum roller shutters were installed on 61 windows, each fitted with ultra-quiet EVO drives. Thanks to BLDC technology, these drives can operate in a range of motion profiles – from dynamic to whisper-quiet. Control is handled via traditional wired switches, while a Bluetooth option supports convenient commissioning.

## Hotel „Hammermühle“

At Hotel Hammermühle, the outdoor terrace was transformed into a weather-independent space using 8 XXL sun umbrellas and 16 transparent roller windows. The roller windows, made of UV- and weather-resistant PVC, are equipped with radio-controlled drives and can be operated almost silently via hand transmitter. This allows up to 140 guests to enjoy the lakeside terrace year-round – regardless of rain or wind. The flexible outdoor area offers significant added value, especially for wedding celebrations, and greatly enhances the appeal of the venue.

## Chocolate Museum in Cologne

At the Chocolate Museum in Cologne, 141 façade awnings in the office wing were comprehensively modernized. Powerful and quiet sun protection drives were installed, combined with a modern radio control system. Control is handled flexibly by individual office users as well as by sun and wind sensors. The entire implementation was carried out during ongoing operations with a high degree of technical precision.

## Sun Sail for a Single-Family Home

An innovative double-triangle sail, with a 7-meter wave span and dual-sided extension, provides effective sun protection. The system is operated by a radio-controlled sun protection drive, complemented by a solar-powered sensor that reacts to sunlight and wind, automatically extending and retracting the sail. High-quality materials, such as stainless steel posts and a UV-impermeable, waterproof sail fabric, ensure optimal protection and comfort for terraces, balconies, and window façades.

# THINK AHEAD

## Expertise through knowledge

To ensure that you can install our systems professionally and advise your customers with confidence, we offer hands-on training sessions for specialist dealers and installers. Our colleagues at the Becker Academy provide targeted know-how and are actively committed to continuous education within the roller shutter and sun protection industry. This way, we ensure that our partners are always able to deliver top-tier service – reliably, professionally, and up to date.

We are pleased to welcome you to our Academy at our headquarters in Sinn. Here, a state-of-the-art training center spanning over 400 m<sup>2</sup> is at your disposal. In our seminar rooms and a hands-on workshop with ten workstations, you'll gain up-to-date knowledge through both theory and practice. Between training sessions, you can unwind with a game of table football, darts, or relax on our indoor terrace. You're also invited to explore our extensive showroom, where you can experience a wide range of Becker products in action.

If you prefer shorter travel distances, we'll gladly come to you! In addition to the Becker Academy, we also offer seminars at various locations throughout Germany. For targeted knowledge delivery, you can take part in our online webinars or use our eLearning tools – for example, for our BoxCTRL products.

## Current topics

The Becker Academy offers a diverse training program with always up-to-date content – hands-on, targeted, and aligned with the latest technology. The focus is on drive and control systems as well as Becker's radio technologies, including integration into smart home environments. The program is further enhanced by a dedicated seminar on building automation.

Training related to electrical specialist qualifications is in particularly high demand – participants can complete both full certification and required refresher courses. For those who prefer compact and efficient learning, Becker also offers seminar series that deliver all relevant content bundled into a five-day program.
