
# BECKER CREATES VALUE.

Products with substance. Consulting with vision.

QUALITY
made in Germany

BECKER
for you. forever.

BECKER
for you. forever.

Our emblem is a symbolic representation of Becker: it evokes a fingerprint – unique and deeply rooted in our company's history. At the same time, it symbolizes the wide range of our applications – from roller shutters and sun protection to smart solutions. The opening shapes represent movement, while the waveforms stand for wireless control. At the center lies the globe – a sign of our commitment to sustainable, future-oriented technologies.

An insight into the world of Becker-Antriebe is provided by shareholder and Managing Director Maik Wiegelmann.

# A FEW WORDS IN ADVANCE

Dear Readers,

Becker stands for progress, quality, and reliability – and for the vision of making our customers' lives simpler, more comfortable, and safer. As a medium-sized company with strong team spirit and many years of experience, we develop innovative drive and control solutions that prove their worth in everyday life – today, tomorrow, and in the future.

Whether in private homes or complex large-scale projects – our products "Made in Germany" ensure smooth operation, maximum comfort, and dependable safety. You are always at the heart of our efforts. Together with strong partners from the skilled trades, we guarantee professional advice and expert installation – for a genuine boost in quality of life.

For you. forever. Three words, one promise: We want you to relax, knowing you can always rely on Becker. Every member of our team contributes with passion to fulfilling this promise every single day.

Get to know us and discover what lies behind the Becker brand – and let's shape the future together.

Warm regards,
Yours sincerely,

Maik Wiegelmann

BECKER
for you. forever.

Innovation born of tradition

# INSIGHTS

When our company founders Emil and Adolf Becker opened the doors to their workshop in Sinn in May 1921, their motivation was to offer solutions that make life easier. This idea has remained with us to this day.

Our company's roots go back to a small mechanical workshop, where Emil Becker laid the foundations for today's brand as a one-man operation. On the very site where our administration building now stands, he began his work with dedication and craftsmanship. It soon became clear that further growth would require machine-based production. However, the funds needed for the necessary investments were lacking. At this crucial stage, Emil Becker received hands-on support from his brother Adolf, a self-employed master electrician. He joined the business as an equal partner – a perfect complement to Emil's skills that paved the way for their shared success.

Initially, the company focused on manufacturing gears. Within just a few years, by the outbreak of the Second World War, Becker had established an excellent reputation as a respected gear-cutting specialist. After the war, the company resumed operations, initially providing contract gear-cutting services. As Germany's post-war economic miracle gathered pace, Becker made a decision that would shape its future: the company developed and manufactured a modern steering gear for the popular three-wheeled trucks made by Hamburg-based Tempo. The patented steering gear proved a resounding success and was produced in large quantities and exported worldwide until the late 1960s. Becker quality "Made in Germany" was making its mark on international markets.

The year 1965 marked an important turning point in our history: Becker entered a new field of business with the development and production of door drives and matching controls for industrial applications. This provided a valuable foundation when the product range was expanded in 1971 to include electric drives for roller shutters and sun protection systems. The development of electrical and electronic control units marked another major milestone, paving the way for future innovations.

In 2013, Becker broke new ground with the introduction of its own CentralControl home automation unit. It allows roller shutters, sun protection systems, electrical appliances and lighting to be controlled centrally – even while away from home. Our continuous development in the smart home sector demonstrates that we are well equipped for the future and actively helping to shape technological progress.

Despite its success and international reach, Becker has remained a family business. Today, Emil Becker's grandson, Hans-Joachim Wiegelmann, and his three sons are closely involved in guiding the company as shareholders. Maik Wiegelmann has led the company as Managing Director since 2023, supported by Carsten Schwarz, who joined as Commercial Director in 2024.

Becker has grown into a sought-after supplier worldwide. Every year, several hundred thousand drives for roller shutters, sun protection systems and other applications leave our factory in Sinn and our international subsidiaries. Companies around the world turn to us for advice on technical challenges, placing their trust in our innovative capabilities and the quality of our products.

We focus on smart home automation solutions that combine convenience, security and energy efficiency. The added value created by our team strengthens our customers' trust. One example is our bidirectional CentronicPlus radio system, which has been continuously refined since 2018 and sets new standards.

Since 2024, Becker has had a new company logo and the tagline for you. forever. Three words, one promise: for our customers, for our partners, for a shared future. Our redesigned circular emblem symbolises the breadth of our work – from moving roller shutters and sun protection systems to innovative radio technology and sustainable concepts for our planet.

Our history is shaped by courage, innovation and a clear focus on the future. These values will continue to guide us as we set new standards and develop smart solutions that make our customers' lives easier and more comfortable.

**As part of this development, Becker established subsidiaries in:**

**Maastricht (since 1992)** – serving the markets in the Netherlands, Belgium, and Luxembourg

**Paris (since 1995)** – serving the French market

**Madrid (since 1999)** – serving the Spanish market

**Prague (since 2001)** – serving the markets in the Czech Republic and the Balkan countries

**Izmir (since 2011)** – serving the markets in Turkey, the Middle East, and several former CIS countries

A production facility has been located in **Slovakia** since1994.

In addition, Becker collaborates with partners in most European countries and overseas who strengthen our brand locally.

BECKER
for you. forever.

Our Mission

We create products designed to last a lifetime – and provide top-level advice and support.

So that our customers can benefit from the advantages of automated applications in the long term.

# A GOOD FEELING

## How Becker inspires your customers.

When purchasing a high-quality product, we all choose the provider we‘ve heard the best things about.

We trust them almost unconsciously. And that is precisely the decisive success factor behind the Becker brand.

Becker stands for much more than just drives. Our customers want to automate their roller shutters, awnings, venetian blinds, ZIP screens and much more. But what they really want goes beyond that: they want to live and work with peace of mind. They want to focus on what matters, without having to worry about technology or functionality. That is exactly what we make possible.

Our products are built to last for what feels like forever – reliable, durable and delivering the highest quality “Made in Germany”. But we provide more than first-class drives and controls: we also offer expert advice and outstanding support. Our aim is to ensure that our customers enjoy the benefits of automated applications for years to come.

Why Becker? Because we offer more than technology. We offer reassurance. The confidence that comes from having the right product in place and the right partner by your side. We keep things running smoothly – today, tomorrow and into the future.

For you. forever. is our promise. We stand for solutions that give our customers peace of mind while helping to preserve our planet. Because true innovation means more than improving today’s technology. It means shaping a future that lasts.

BECKER
for you. forever.

## CREATED TO LAST

Drives and controls built to last for what feels like forever: durable, forward-looking and offering lasting value – through unbeatable quality “Made in Germany”

Immerse yourself in the world of Becker-Antriebe and gain fascinating insights into the production and creation of our high-quality tubular drives. Experience precision, innovation, and passion – the values that define us.

# QUALITY THAT CONVINCES

Why quality makes all the difference at Becker.

At Becker, quality means more than just durable products. We create valuable solutions designed to last a lifetime – “Made in Germany” and manufactured with the highest precision.

You can count on Becker to be the right partner by your side for the long term. For us, the highest quality and reliable delivery go without saying.

We see quality as an ongoing process that we continually develop and improve. We constantly strive to achieve the best possible standards across every relevant aspect of quality – from the durability, reliability and ease of use of our products to the sustainability* of our company, the customer experience, streamlined ordering processes, expert advice and practical training.

BECKER
for you. forever.

Principle

# VALUES THAT ENDURES.

Responsibility starts with durability – and that is exactly what we expect of our products. At Becker, we focus on quality that stands the test of time. Our drives, controls and solutions are designed to require minimal maintenance and deliver reliable performance for decades. This means fewer replacements, lower resource consumption and, ultimately, sustainable use.

Our solar-powered products are another example of our commitment to sustainability. They enable efficient, resource-saving control, independent of the power grid. In this way, we contribute to both the energy transition and the protection of our planet.

Our vision is to develop forward-looking solutions that combine lasting performance with innovation. Durable, reliable and high-quality – for a world that remains a good place to live for generations to come.

A smart home saves energy and makes life more comfortable. Depending on the building type, construction and proportion of glazing, intelligent control solutions can reduce heating costs by up to 30 per cent.* Roller shutters and sun protection systems respond automatically to changes in the weather – keeping the heat out in summer and the warmth in during winter. With no effort required from the user, they offer tangible benefits for energy costs and, in turn, the environment.

* Details of the $CO_2$ and energy savings that can be achieved with automated roller shutters and sun protection systems are available via the following link from the German Industry Association for Roller Shutter and Sun Protection Automation (IVRSA): www.ivrsa.de/richtlinien-und-wissen/studien/

## Our Measures

- Energy management system certified to DIN EN ISO 50001
- Solar power from our own photovoltaic systems
- Promotion of electric mobility
- Use of recycled paper for our printed materials
- Support for local reforestation projects

Since 2006, the company has been working in accordance with the requirements of DIN EN ISO 50001 – an internationally recognised standard for a certified energy management system. This system enables Becker to systematically monitor, analyse and continually optimise its energy use. The aim is to achieve a lasting reduction in energy consumption, conserve resources and steadily improve energy efficiency.

Becker also prioritises environmentally conscious practices in its day-to-day operations. Photovoltaic systems have been installed on the dispatch hall and the Becker Academy building to harness clean solar energy. This not only reduces energy costs but also increases independence from external electricity sources.

Another key focus is promoting electric mobility. The company fleet is gradually being electrified, with plug-in hybrid electric vehicles (PHEVs) and battery electric vehicles (BEVs) having been the preferred choice for new purchases for several years. The charging infrastructure has been designed with ample capacity, runs on green electricity and is available free of charge to employees, customers and suppliers alike.

In addition, Becker consistently uses recycled paper for all its printed materials and supports projects such as local reforestation to actively contribute to environmental and climate protection.

BECKER
for you. forever.

Principle

# SUCCESS:
# FAMILY-OWNED BUSINESS

## Yesterday, today, and in the future.

Becker is and will remain an independent family business. Despite our success and international reach, we have always preserved our family roots. Today, our founder Emil Becker's grandson, Hans-Joachim Wiegelmann, and his three sons are closely involved in guiding the company.

Maik Wiegelmann has led the company as Managing Director since 2023. In 2024, Carsten Schwarz joined the management team as Commercial Director. Together with his brothers Andersen and Julian, Maik Wiegelmann shares responsibility for the company's future as a shareholder.

Hans-Joachim Wiegelmann also remains an influential figure in the company as a shareholder and owner.
"We are proud that Becker remains a family business. Our values, our entrepreneurial spirit and our long-term perspective will continue to be the foundation of our success."
– Maik Wiegelmann

QUALITY
made in Germany

# DEEPLY ROOTED

Becker is a European company with strong roots in Germany. Active worldwide yet firmly rooted in Sinn, Hesse, where our company was founded, we combine tradition with innovation and stand for quality "Made in Germany".

With more than 350 employees worldwide, including around 240 in Germany, we focus on reliable, forward-looking solutions. Our success is reflected in the figures: annual revenue of €62 million and a production capacity of 750,000 tubular drives per year speak for themselves.

Through our subsidiaries in the Benelux countries, France, Spain, the Czech Republic, Türkiye and Slovakia, as well as strong partners in Asia, Australia, Europe, the Middle East and Africa, we have built an extensive international network. Despite our global presence, our foundations remain clear: quality, reliability and innovation – from Germany to the world.

BECKER
for you. forever.

# PRODUCTS THAT THINK WITH YOU

## Your benefits at a glance

- Reliable “Made in Germany” quality
- Easy and time-saving installation
- Fast and intuitive programming
- Smart home-compatible systems
- Noise-optimized and maintenance-free drives
- Radio solutions with high stability
- Wide product range for numerous installation scenarios
- Accessories and extensions from a single source
- High compatibility within the Becker system
- Long-term spare parts availability

## *FIT FOR* ***SMART HOME***

Not everyone wants to install a smart home system right away when renovating or building a new home. If your customer decides against a smart home solution today – for whatever reason – we still recommend laying the groundwork for the future when installing a new roller shutter or sun protection drive. Make your customers‘ homes future-ready and give their children or potential buyers of the property the option to easily retrofit a smart home hub at a later stage.

# SPECIAL REQUIREMENTS

## The Becker modular system for customized solutions.

A pool that can be safely covered at the push of a button. A sturdy aircraft boarding step that instills confidence in travelers from the moment they board. Or a fire protection curtain in a shopping mall that deploys reliably within seconds in an emergency. Such special requirements call for equally special solutions – and that‘s exactly where Becker Extended Applications comes in. With our flexible modular drive system, we offer customized solutions for applications where standard series drives are not enough.

Our proven technology enables designers and developers to integrate powerful, tested, and reliable drives into demanding projects. This paves the way for intelligent systems that deliver greater comfort, efficiency, and safety.

## EXTENDED applications

For projects of any size

# RELIABLE TECHNOLOGY

Our products are used in a wide variety of projects – from smart single-family homes to complex commercial properties. Whether it’s private dream homes, modern office buildings, hotels, or unique places like a chocolate museum – wherever reliable drive and control technology is needed, customers trust Becker solutions. Be inspired by our reference projects and discover just how versatile intelligent building automation can be.

## Chocolate Museum in Cologne

At the Chocolate Museum in Cologne, 141 façade awnings in the office wing were comprehensively modernized. Powerful and quiet sun protection drives were installed, combined with a modern radio control system. Control is handled flexibly by individual office users as well as by sun and wind sensors. The entire implementation was carried out during ongoing operations with a high degree of technical precision.

## Hotel „Hammermühle“

At Hotel Hammermühle, the outdoor terrace was transformed into a weather-independent space using 8 XXL sun umbrellas and 16 transparent roller windows. The roller windows, made of UV- and weather-resistant PVC, are equipped with radio-controlled drives and can be operated almost silently via hand transmitter. This allows up to 140 guests to enjoy the lakeside terrace year-round – regardless of rain or wind. The flexible outdoor area offers significant added value, especially for wedding celebrations, and greatly enhances the appeal of the venue.

## Sun Sail for a Single-Family Home

An innovative double-triangle sail, with a 7-meter wave span and dual-sided extension, provides effective sun protection. The system is operated by a radio-controlled sun protection drive, complemented by a solar-powered sensor that reacts to sunlight and wind, automatically extending and retracting the sail. High-quality materials, such as stainless steel posts and a UV-impermeable, waterproof sail fabric, ensure optimal protection and comfort for terraces, balconies, and window façades.

## Athletics Hall of VfB Stuttgart

In the athletics hall of VfB Stuttgart, a custom sun protection system ensures optimal training conditions. Seventeen seamless ZIP screens, each 6.30 meters high, shade the glass façades while still allowing an unobstructed view to the outside. The vertical awnings are operated via wired drives integrated into the hall’s KNX system, enabling flexible adjustments to weather conditions and user needs. This guarantees a glare-free and comfortable indoor climate for the professionals all year round.

## Multi-Family Residence on Lake Constance

In the center of Friedrichshafen, a residential building with 11 apartments was constructed, blending harmoniously into the historic surroundings with its traditional mansard hip roof. Aluminum roller shutters were installed on 61 windows, each fitted with ultra-quiet EVO drives. Thanks to BLDC technology, these drives can operate in a range of motion profiles – from dynamic to whisper-quiet. Control is handled via traditional wired switches, while a Bluetooth option supports convenient commissioning.

BECKER
for you. forever.

Becker Academy

# THINK AHEAD

## Expertise through knowledge

To ensure that you can install our systems professionally and advise your customers with confidence, we offer hands-on training sessions for specialist dealers and installers. Our colleagues at the Becker Academy provide targeted know-how and are actively committed to continuous education within the roller shutter and sun protection industry. This way, we ensure that our partners are always able to deliver top-tier service – reliably, professionally, and up to date.

We are pleased to welcome you to our Academy at our headquarters in Sinn. Here, a state-of-the-art training center spanning over 400 m² is at your disposal. In our seminar rooms and a hands-on workshop with ten workstations, you'll gain up-to-date knowledge through both theory and practice. Between training sessions, you can unwind with a game of table football, darts, or relax on our indoor terrace. You're also invited to explore our extensive showroom, where you can experience a wide range of Becker products in action.

If you prefer shorter travel distances, we'll gladly come to you! In addition to the Becker Academy, we also offer seminars at various locations throughout Germany. For targeted knowledge delivery, you can take part in our online webinars or use our eLearning tools – for example, for our BoxCTRL products.

## Current topics

The Becker Academy offers a diverse training program with always up-to-date content – hands-on, targeted, and aligned with the latest technology. The focus is on drive and control systems as well as Becker's radio technologies, including integration into smart home environments. The program is further enhanced by a dedicated seminar on building automation.

Training related to electrical specialist qualifications is in particularly high demand – participants can complete both full certification and required refresher courses. For those who prefer compact and efficient learning, Becker also offers seminar series that deliver all relevant content bundled into a five-day program.
